OUR TERMS ARE NET CASH

OUR PRICES—We will adhere as closely as possible to the prices quoted in this Catalogue, but the market value of some seeds is variable. This includes the grass and clover seeds, field seeds and onion setts and these will be quoted upon request.

ORDERS-Please furnish credit references if you do not remit with order.

ADDRESS, Etc.—When ordering, be sure that your NAME, POSTOFFICE, COUNTY and STATE plainly appear in your letter and whether you prefer to have us ship by mail, express or freight, otherwise we will ship cheapest way.

REMITTANCES may be made at our risk, by check, draft, P. O. or express money order, or in sums of \$2.00 or less by registered mail. Unused postage stamps to the amount of \$1.00 will be accepted.

RATES OF POSTAGE

SEEDS BY MAIL—In justice to our many customers who live in this immediate vicinity and are not obliged to consider postage and express charges, we do not include such charges in the prices quoted in our catalogue; the prices given are for goods here in our store. We will continue, however, to mail free all SEEDS in packets and ounces to any amount, any where in the U. S. at catalogue prices. In larger packages, we will mail free in the FIRST, SECOND and THIRD ZONES, all VEGETABLE and FLOWER SEEDS, ROOTS and BULBS to the amount of ONE DOLLAR or over. On lesser amounts, please add 10% to cover postage or at least 8c for the first pound, which is the minimum charge, otherwise we will be obliged to deduct for postage. Beyond the THIRD ZONE please add postage according to the distance. On account of their perishable nature PLANTS should be shipped by express only.

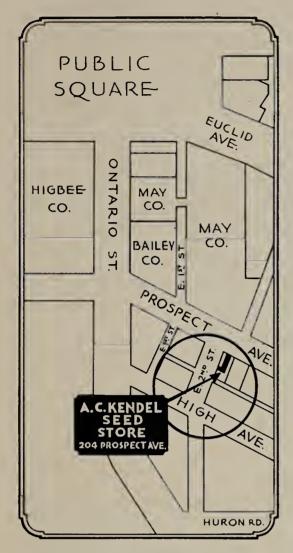

BAGS ARE FURNISHED AT THE FOLLOWING RATES: Pecks, 10c; half-bushels, 20c; one bushel, 30c; two bushel, 50c each. In remitting for orders please add a sum to cover the cost of the necessary bags.

WARRANTS

WARRANTS—We buy our stocks from reliable dealers, some of them for more than sixty years. We make germination tests of each lot of Vegetable Seeds that we offer, thus reducing to a minimum the chances for failure. Our Flower Seeds are always of the new crop and thus of the highest vitality. But we wish to make it clearly understood that because circumstances may arise after seeds are planted, over which we have absolutely no control, we find it necessary as is customary in the Seed Trade to give no Warranty, express or implied, as to description, quality, purity, productiveness, or any other matter of any Seeds, Plants or Bulbs we send out, and will not be responsible in any way, for the crop. If the purchaser does not accept the goods on these terms, they are to be returned at once.

A. C. KENDEL'S SEED STORE.

The above map depicts our new location which we are sure will prove convenient. It is only a few steps from where we have been on High Ave. and on Ontario St.

C. E. KENDEL President

FOREWORD

N account of the great change in the locality in which we have been for the past twelve years we have deemed it wise to move to our more convenient location at 204 Prospect Ave., next to the corner of East 2nd St. The adjoining map shows this in relation to the surrounding stores, May's, Bailey's, Higbee's, etc. There is no change in the personnel. Charles R. and Edward R. Kendel, sons of C. E. Kendel, being now associated in the business established 94 years ago.

We are prepared to supply our usual high grade seeds at prices in line with the prevailing conditions. Nearly all varieties of vegetable seeds are again put up in 5c packets. It may not be necessary to make a living out of a garden; but it is wise to have a supply of fresh vegetables, such as radishes, lettuce, tomatoes, onions, beans and salads, to maintain the health of the family, especially of the little children.

As usual, we carry seed stocks from known sources that have proven suitable for our locality and you take less risk when you buy Kendel's Seeds: they are backed by 94 years in business.

NEW SEEDS OF MERIT ANNUALS

New Double Dwarf Nasturtium "Golden Gleam." This outstanding novelty will be welcome wherever Nasturtiums are grown. The plants are vigorous growers and produce until frost, semi-double, fragrant golden yellow flowers, on long stems that almost hide the foliage. Nasturtiums require only ordinary soil. Per packet	
(15 seeds)	\$.15
New Marigold "Guinea Gold." Flowers are orange yellow, flushed with gold, 2 to $2\frac{1}{2}$ inches across, more loosely formed and less pungent than the older types. Excel-	* *20
lent cut flower. Packet	.25
New Snapdragon "Majestic." This type produces compact heads with the flowers touching each other. The color range is quite complete, including the delicate autumn shades. Considered the choicest strain of Snapdragon yet produced. Avalanche. Snowy white. Rose Marie. Salmon rose. Eldorado. Deep golden yellow. Sunset. Terra cotta and salmon rose. Golden Dawn. Golden buff. Twilight. Apricot, shaded yellow. Red Chief. Rich, deep scarlet. Superb Mixed. All colors.	
Any of above per packet	.25

LAWN GRASS SEED

E have for many years given particular attention to lawn grasses that would make a thick sod, withstanding the heat of summer and the cold of winter under the many varying conditions of soil, shade, and location and feel free to say that it takes several different kinds to meet all conditions and no one kind or even mixture will be suitable everywhere. We have four different mixtures as enumerated below, that will pretty well meet the needs of everyone in this part of the country. Shadilawn should be sown very early in the spring, before the leaves on the trees cast much shade; all our

other mixtures may be sown either spring or fall. The most important part of lawn-making is to use plenty of good seed, suitable for the purpose. You will get some kind of a lawn with good seed even if the soil is poor or the conditions bad but with poor seed, never, no matter what else you do. It takes experts to tell the difference before the seed is sown but

not when it comes up. Barnyard manure is not suitable to use on a lawn on account of the weeds that are sure to follow. Top soil that is not infested with Crab Grass or Chick Weed is hard to find and expensive to use. The safest way is to rake in a liberal amount of Sheep Manure and Bone Meal, half and half, as much as a pound of each per square yard and each spring, when the grass is showing green put on more bone meal at the rate of a pound to 5×10 feet and you will not only settle the weed trouble but have that nice, thick sod that everyone desires and so few have. On sandy soil a dressing of Peat Moss on top of the seed will greatly increase the catch and conserve the moisture as well as the fertilizer, without choking out any of the lawn.

There is a great diversity of opinion in regard to watering. Frequent watering tends to encourage the grass roots to stay near the surface. They should grow down, the deeper the better. Therefore the less watering is done the less is necessary and then when a drought comes a good soaking will be more effective. Set the mower so the grass will be left longer in July and August as a protection from the heat and clip as short as you like the rest of the time. To leave or not to leave the mowings on the lawn is another controversial question. It seems logical to advise the use of the grass catcher if there are any weeds because some of our worst weeds, notably Crab Grass which turns the lawn so brown in August, are annuals that could be controlled if the seed was gathered. Dandelion heads should certainly be gathered. From September on, the cuttings might be left as a winter protection, but raked out as early as possible in the spring.

LAWN GRASS SEED

This is our well known and increasingly popular mixture of Grass Seeds that will actually make a lawn, no matter how shady nor what makes the shade. Sown early, before the leaves on the trees get started, it will come up promptly and stay all summer. Under Maples and Elms, it is well to put on a light sowing of fertilizer three or four times during the season and a good soaking, when necessary, due to the demands of the tree roots, which usually fill the ground and will cause any grasses to succumb, but in most shady places, SHADI-LAWN will survive better than any other. 1 lb. 50c; 3 lbs. \$1.40; 5 lbs. \$2.25; 10 lbs. \$4.00; 20 lbs. \$8.00; 100 lbs. \$37.50.

LAWN GRASS SEED

This is the same mixture of grasses that we have sold for fifty years with utmost satisfaction. Nothing but the highest grades and cleanest seeds are used. A pound sows 10×20 feet of bare ground. Price: 1 lb. 40c; 3 lbs. \$1.25; 5 lbs. \$2.00; 10 lbs. \$3.50; 20 lbs. \$7.00; 25 lbs. and over $32^{1}/2c$ per lb.

CREEPING BENT MIXTURE

In some localities a tough grass is required that will withstand rough treatment. On Putting Greens it has been found that the Bent Grasses best meet the conditions. This mixture has a liberal proportion of Bent Grass seed and will give that fine tough sod so much desired. A pound sows 15 x 20 feet. Price: 1 lb. 90c; 3 lbs. \$2.50; 5 lbs. \$4.00; 10 lbs. \$6.50; 25 lbs. and over 60c per lb.

"DO WELL" LAWN SEED

A mixture of lower priced grass seeds, equally clean but intended for back yards, or for temporary uses. 1 lb. 35c; 3 lbs. \$1.00; 10 lbs. \$3.00; 25 lbs. and over 25c per lb.

GRASS SEEDS

We carry a full supply of bulk grass seeds, Kentucky Blue and Canadian Blue, Fancy Red Top, White Dutch Clover, Bent Grasses, Fescue Grasses, Timothy, Poa Trivialis—all of the highest grades, thoroughly cleaned and all showing their purity and germination. Prices on application.

sorts	\$.05	\$.15	\$.50	\$1.50

BEANS—Dwarf or Bush—(Bush Bohnen)

Beans need more space than is usually believed—at least two inches apart in the rows. Being tender, none should be planted before middle of May, but successive plantings may be made until beginning of August. Unless the garden, through long use is well supplied with the proper legume bacteria, a 35c Composite bottle will inoculate all the Beans, Peas and Sweet Peas you will probably sow and will many times repay the trouble in larger yields. Bean Rust disease is aggravated if beans are cultivated when wet.

One nound will plant 52 foot of the state of the state

One pound will plant 50 feet of row.

BEANS—Bush—Lima

Limas can not be planted as early as other beans, but time may be gained by opening a three inch trench the day before planting, so the sun will warm the ground enough, and sticking the seeds eye down, eight to eighteen inches apart according to the fertility of the soil and just deep enough to be in sight. As they sprout, fill up the trench. Cracked or broken seeds will not grow. When the bushes are well set with pods put a tablespoonful of fertilizer, high in phosphoric acid, around each plant which will greatly increase the yield.

Improved Long Orange. Medium long		1/4 lb. \$.35 .35	

CAULIFLOWER—(Blumenkohl)

The weather has more to do with success in raising Cauliflower than almost any other vegetable. If it is cool, good heads may be expected, if not, the crop will be more or less of a failure, anything but the very best seed however, invites failure from the very outset. Because the price of seed runs into large figures is a very poor reason for trying to save a dollar on the seed. The crop is what you want and no poor seed will ever produce a good crop of anything except trouble and disappointment.

One ounce will produce 3000 plants.

Plants ready in May

Early Snowball. Dwarf and compact; very reliable for heading15	. 75	1.25	2.50

CELERY—(Sellerie)

One important factor in raising celery from seed is to have the seed bed fine and the seed firmly packed down when it is sown, a half inch deep. Next it is necessary to keep it growing—a check in growth is sure to be followed by hollow celery. In the garden, plants which are ready in June, may be set out four inches apart between alternate rows of early corn, affording necessary shade at the start. After the corn is pulled the stalks should be removed to let the celery grow. Plant only the best plants in the start of the corn is pulled the stalks should be removed to let the celery grow.

CORN—(Zucker Mais)

Plant in rows and thin out inferior stalks, leaving a strong stalk each foot or fifteen inches. Rows may be thirty inches apart for early dwarf and forty-eight inches for late tall sorts. Plant a half inch

CORN (Continued)

deep at first and deeper as the ground warms up, but three inches is the limit. The suckers should be twisted off when they get six or eight inches high and the stalks hilled up when a foot high. Shallow cultivating is important because the corn roots are near the surface. Two plantings may be made but If more are wanted, it is safer to plant later sorts early. May 10th is, on an average, the earliest safe date to plant corn, but a few plants can be started in small pots earlier and planted out after danger from frost has passed.

One pound will plant 100 feet of row or 100 hills.

ENDIVE—(Endivien)—Escarolle

The slightly bitter taste of this excellent salad plant is an agreeable change from lettuce and is at its best when lettuce is past its prime. Endive is handled much like lettuce, taking longer to grow, but requires blanching, which is done when the plants are large enough, by gathering the outside leaves together and tying them with raffia, not at the ends but about half way up, a few at a time, allowing three weeks to blanch, when they must be used or they will decay. As frost comes the plants can be lifted, soil and all and stored in baskets in a cool place where they will keep for a month.

HERBS—Sweet, Pot and Medical

A small space in the garden may be used to good advantage for the cultivation of a few of the most useful and desirable herbs. Their cultivation is very simple, but little care being needed beyond keeping down the weeds. Sow in April or May in drills twelve to fifteen inches apart, and thin out the young plants where they stand too thick.

The state of the s	PKT.	OZ.
ANISE. (Pimpinella anisum.) An annual herb cultivated principally for its		<u> </u>
seeds which have a fragrant, agreeable smell and a pleasant taste; used

very large onion, passing for Bermudas	.05	.20	.60	2.00
YELLOW GLOBE DANVERS. Grown in larger quantity than				
all others combined. Our standard yellow winter onion	.05	.20	.60	2.00
For onion seed in large quantities, write for special price.				

OKRA, or GUMBO—(Essbarer Hibiscus)

The young seed pods are cut up, and used for soups and stews. Sow thinly in rows in June and thin to two feet apart each way.

		Pkt.	Oz.	¼ lb.	Lb.
Tall Green. Grows two to the	ee feet high	\$.05	\$.15	\$.30	\$1.00
White Velvet. Dwarfer and p	ods light green. Best	sort	.15	.30	1.00

PARSLEY—(Petersilie)

The chief difficulty with parsley is to get the seed up, which is because it takes five or six weeks to germinate. Sow the seed thinly, about one-fourth inch deep, early in April and cover with a thin board and you will have no trouble. Thin the plants to three inches apart. A few small plants in a pot will grow nicely in the house during the winter.

•	Pkt.	Oz.	¼ lb.	Lb.
Plain Leaved. Much used in soups, etc	\$.05	\$.15	\$.40	\$1.00
Extra Double Curled. A choice variety, well curled	05	.15		1.25
Hamburg, Large Rooted. The roots are used in winter		.15	.40	1.25

PARSNIP—(Pastinak)

Being a plant that requires all season to mature, it is essential to sow early in May and get the seed up the first time. A beating rain may harden the ground and prevent the delicate sprouts from coming through, therefore sow a little early radish in the row along with the parsnip, which will break the crust for the latter. Sow a half inch deep and thin to two or three inches apart. Never try to raise parsnips on freshly manured land as they will grow forked roots of little use.

Use one ounce of fresh seed to 200 feet.

Pkt. Oz. ¼ lb. Lb. GUERNSEY HALF LONG. The best sort to use in this region.\$.05 \$.15 \$.30 \$1.00

PEAS—(Erbsen)

If you have the room, few vegetables taste so good as home grown peas. They should be sown early, the earliest in March, an inch deep at first and as the ground warms up, deeper but not over three inches. Later sowings, say July, are apt to be disappointing, so it is better to sow early, medium and late sorts at the same time, the later sorts making larger pods and seeds. It pays to inoculate the seed with Legume Bacteria, same as beans. If the pods are not well filled, the soil lacks phosphorus, and if the vines do not grow well the soil should be limed before the next season.

A pound will sow 50 feet of row.

	Pkt.	½ lb.	Lb.	5 lbs.
KENDEL'S FIRST OF ALL. For many years the best smooth,				
extra early sort\$.10	\$.25	\$.40	\$1.60
Little Marvel. The earliest wrinkled sort. Should not be sown				
until the ground is warm	.10	.25	.40	1.60
NOTTS EXCELSIOR. In this locality this has, for many years				·
been the best all round early, wrinkled variety both in qual-				
ity and yield. The ground must be warm to get a good				
stand	.10	.25	.40	1.60
Gradus. In some localities this large podded sort is extensively				
used but in others does not fill well. Seeds very large, sweet				
and tender; an excellent sort where they will yield	.10	.25	.40	1.60
PIONEER. A very hardy wrinkled sort suitable for early plant-				
ing. Pods are large and well filled resembling the Tele-				
phone. The peas are large and of splendid quality which				
they retain for a long period. Vines grow two feet; suit-			•	
able for successive plantings	.10	.25	.40	1.60
Blue Bantam. One of the newer sorts; heavy cropper and				
good quality	.10	.25	.40	1.60
DWARF TELEPHONE. The best late dwarf sort. Large, well				
filled pods; seeds large, tender and sweet	.10	.25	.40	1.60
Tall Telephone. If brush can be had for them to run on, tall				
peas will greatly out-yield the dwarf sorts. This is the				
leading tall variety	.10	.25	.40	1.60

PEPPER—(Pfeffer)

Pepper seed needs a temperature of 80 deg. to sprout so if you need only a few, get the plants from us in latter part of May. Set two feet apart.

An ounce of seed makes 3000 plants.

Scarlet China Winter. A half long sort, thicker at the bottom.	.05	.15	.40	1.00

RHUBARB—(Rahbarber)

Rhubarb requires an abundance of rich soil and water to make a good crop. Use a liberal dose of Sheep Manure with a small amount of Nitrate of Soda dug in around the roots very early in the spring. A barrel with both ends out set over a plant will make longer stems and earlier. It takes four years for seed to produce a crop, but roots, which are ready in April, produce the second year.

								Oz.		
Victoria.	The	principal	variety	in	this	market\$.	.05	\$.25	\$.75	\$2.50

SALSIFY—(Haferwurzel)

Commonly called Oyster Plant because it tastes so much like oysters. A winter vegetable but little appreciated by most people, but greatly liked by those who know it. Early Radish seed sown with salsify will assure a good stand as it is important to get it up well the first time so the roots will be large enough. Like parsnips, they may be left in the ground in winter and dug as wanted. If frozen when dug, will thaw out, without injury in icy cold water.

Use one ounce to 50 feet of row.

Mammoth used ...

NEW ZEALAND SUMMER. Yields continuously, the tips only				
being used. Profitable in the smallest garden, three or four				
plants producing a peck each week	.05	.15	.30	1.00
Liberal reduction allowed on larger quantities.				

SQUASH—(Speise Kuerbis)

The chief trouble encountered with squashes is caused by the bugs and borers. A dusting of Slug Shot after each rain will check the bugs but the borers in the stem, which attack the running sorts can be circumvented only by causing the vines to root at three or four of the joints by covering with soil, so that, when the borer gets into the main stem and would kill the vine, the roots at the joints would be sufficient to sustain it and no damage would result. This simple precaution has saved many acres of squash. Plant six or eight seeds in a hill, the early three or four and the late sorts twice as far apart, after middle of May and the ground is warm.

Culture and Care of Flowers

N OUR List of Flower Seeds will be found all those varieties known to be desirable and worthy the attention of florists and amateurs. Our Catalogue is arranged with a view to aid our patrons in their selection by offering the very best varieties of each species, and to avoid the confusion attending the selection from eatalogues in which the greatest possible number of varieties are presented, regardless of their value, many of which only disappoint the cultivator by taking time and garden space which might otherwise be used in growing better flowers.

Success. With patience and the exercise of reasonable judgment, anyone may soon acquire experience enough to successfully grow most of the species of flowers; failure more often results from ignorance and neglect than from any fault of the seeds or of nature. CONSTANT CARE IS REQUIRED in any event.

Requisites.

A few suggestions may prove of value to those who are unfamiliar with florieulture; the selection of the seeds, the preparation of the flower-beds or borders, the choice of location best suited to each species, the use of fertilizers, the time and manner of sowing seeds or of setting plants, the destruction of noxious weeds and injurious insects, and many other details incident to the cultivation of a flower garden—each of which requires care and more or less skill.

Reliable Seed. is the first requisite. We spare no pains or expense to procure the VERY BEST. A thorough trial of our seeds will do more to establish this fact in the minds of statement made by us would be likely to do.

Causes of Failure. The seeds of some of the species are very small and delieate, and from many causes are liable to fail, particularly when sown in the open ground. IF SOWN TOO EARLY, the earth lacks the warmth necessary to insure germination; IF COVERED TOO DEEPLY, the delicate sprouts cannot force their way through; IF HEAVY RAINS ENSUE, the seeds may be entirely washed away or the soil beaten down and crusted over, or perhaps left in such a wet condition as to cause the seed to decay. Again, the sowing may be followed by EXTREME HEAT AND DROUGHT, and if the seeds have started to germinate the germs are liable to become dry again, in which case they are utterly ruined.

When and How to Sow.

The first of May is early enough, in this latitude, to sow most of the species in the open ground; too early sowing is a great mistake. The small and delicate seeds must be covered VERY LIGHTLY with earth; the finest of them had better be sown WITHOUT ANY COVERING, the simple pressure of a smooth board dition, the covering of such seeds with various kinds of delicate seeds, induces us to advise in addition, the surface evaporation, which so often causes failure, besides protecting the ground, thereby preventing the surface evaporation, which so often causes failure, besides protecting the seeds from being forced into the ground so deeply through eareless watering, that they could not sprout. A light covering of fine Peat Moss will greatly increase the stand without harming the most delicate sprouts. Very delicate seeds, such as Salpiglossis and Giant Petunias are easily sprouted by filling the hollow side of a common brick with finely sifted soil on which the seed should be thinly sprinkled and the brick kept in a pan of water until the plants are large enough to transplant. By following one of these methods, many seeds that are rather difficult to start may be quite successfully grown. The larger and more hardy seeds may be planted deeper and some of them earlier. It is a safe rule to sow most seeds to a depth of FOUR OR FIVE TIMES THE DIAMETER of the seed itself.

Location. A rather light sandy loam suits most flowers, and, in such soils, seeds generally germinate well. Some flowers thrive best in a rather shady situation and in rather heavy elay soils (the Pansy is a notable instance), while others do best upon light, poor soils, and exposed to the full rays of the sun; this is particularly true of the Portulaea.

Early Sowing.

The seeds of nearly all the annual varieties, and many of the biennials and perins and a gain of several weeks made in the season of blooming; less weeding of the flower-beds will be necessary, and, when the plants are set out of doors further transplanting is not required. Shallow boxes, two or three inches deep, and with open seams at the bottom are the best in which to start the seeds. Fill these boxes to within half an inch of the top with good rich soil, mixed with about one-fourth sand; or, if convenient, procure some fine leaf mould from the woods. Make the surface level and smooth, and upon this scatter the seed sparingly. Use a fine sieve, with which sift carefully over the seeds just enough earth to cover them. Afterwards gently shower them with tepid water, using a fine sprinkler, and keep the boxes in a temperature as near 60° as possible. Avoid much watering unless the surface of the soil appears dry. Transplant into other boxes when the plants are large enough to handle, setting them from half an inch to an inch apart. Sometimes the young seedlings are attacked by a minute fungus, which causes them to "damp off." Lack of sufficient ventilation aggravates the trouble. By first treating the seed with a light dusting of Semesan, described more fully in the back of this catalogue, the danger from this source may be practically eliminated. However, if it does appear, no time is to be lost in transplanting the unaffected plants into other boxes. In setting plants out into the beds or borders, allow a liberal space for each; crowding too many into a small area is a mistake very often made.

Late Sowing. Most of the biennials and perennials may be sown late in the summer, from the middle of August through September, and they will then bloom the following season. When eold weather sets in, about the only protection necessary for the young plants is a covering of leaves, straw or litter to a depth of three or four inches, and a board on top to keep it in place. They should be uncovered soon after the middle of March.

Fertilizing. No matter what the soil is, heavy or light, the three major fertilizing elements are Nitrogen, Phosphorus and Potash re-enforced by plenty of humus or rotted vegetable high as a source of Nitrogen and more particularly of Phosphorus and there are many brands of fertilizers that combine all three elements in varying amounts and in the total. The greater the total, the more sparingly should it be applied to avoid burning. The seed beds, in which plants are started, to be transplanted later, should be no richer than the garden and better results will follow if somewhat poorer. Put the fertilizer in the garden before or at the time of transplanting and if plants are not growing properly later on, water the ground around them with Nitrate of Soda or Nitrate of Potash two or three times, a teaspoonful of either in a gallon of water.

Biennials,
Perennials.

Biennials,
Perennials.

Flowers are classified as Annuals, Biennials and Perennials. Annuals are those plants that bloom the first year from seed, and, after ripening their seeds, perish the same season. They comprise many of the most beautiful flowers, and, as a rule, are of easy eulture. Some of the Biennials and Perennials will flower the first season if the seed they may then be kept over for another year or longer. Pansy, Snapdragon, Pinks, etc., belong to this class. Biennials bloom the second year from planting the seed, and then die. Perennials, as a rule, bloom the second year, and are more or less permanent thereafter. The seeds of some of the Perennials remain a long time in the soil before germinating. Several species of the Biennials and Perennials will succeed well if the seeds are sown in early autumn. Annuals,

General List of Flower Seeds

Our wide acquaintance with the trade, both in this country and abroad, places us in constant touch with the leading experts and specialists in seed growing from whom we buy direct. This not only reduces chances for error but fixes responsibility, assuring us of the choicest seeds and the latest introductions. We strive to make our list as complete as possible but of only such kinds as we know are suitable for this locality. Our friends may therefore feel sure of success with their selections under reasonable weather conditions.

In ordering, the numbers are sufficient.

ACHILLEA. (Milfoil or Yarrow.) PKT. .10

ACONITUM. (Eisenhut.) (Monk's Hood.)
Hardy perennials with panicles of blue helmetshaped flowers in the fall.

Italica,

ANTIRRHINUM. (Snapdragon.)

ANTIRRHINUM. (Snapdragon.)
(Loewennaul.)

Within the last few years Snapdragons have become immensely popular. This is not to be wondered at, as, whether used for cutting or for show in the garden, they are one of the most valuable flowers which can readily be grown from seed. Sown out of doors the first week of May, the plants bloom early in July, remaining in full flower until November. For earlier

ANTIRRHINUM (Snapdragon)

flowering, start indoors or in a frame in March, transplanting to the open when the weather is suitable.

If troubled with rust, dust the plants with pow-

dered sulphur.

TALL MAXIMUM

The following list comprises the principal colors of the newest creation in Giant Snapdragons being a marked advance in size and brilliancy of color as well as compactness of flowers on the

	flowers of a pure white, the reverse of	
	the petals being a pale lilac. Easily	
	grown in the sun. Valuable for cutting	10
	from July until frost	.10

ASTERS

(Schoenkranz, Aster.)

This flower is not only one of the most popular, but also one of the most effective of our garden favorites, producing flowers of great richness and variety of color, in the most perfect and beautiful form during the late summer and early fall. They bear a striking resemblance to Chrysanthemums and are fully as useful for cut flowers.

If Asters are grown in the same spot a few times, they are apt to be attacked by a disease that turns them yellow before they flower. They should be grown in a different bed each year and if the seed is treated first with Semesan, this trouble will be reduced. Sometimes ants carry Aphides to the roots and cause the plants to turn yellow and die. More large flowers will be produced if the center bud on the main stalk is ninched out as soon as noticed.

main stalk is pinched out as soon as noticed.

The recent development of Asters in California has placed them in a class with the finest and most satisfactory flowers we can have in our gardens.

Lakewood Prize Mixture. Our customers often find that the various types of Asters are so beautiful that it is difficult to choose between them. By mixing the tall growing varieties of every color in all the types we list below such as Beauty, Improved Giants, Branching, Royal, Ostrich Feather, etc., we have a mixture that will enable everyone to have a few plants of all the choicest kinds in a complete assortment of color. We cannot recommend it too highly. Trade pkt.

Painted Daisy

CHRYSANTHEMUM. (Wucherblume Goldblume.)

Showy and effective garden favorites. The annual varieties are in great demand, and extensively grown for eut flowers, making a fine pot plant for winter, and excellent for beds or borders through the summer. Sueceed best in loam and rotted manure, equal parts.

Seeds may be sown in hotbeds during March or outdoors during May. Pinching back in early growth makes bushy and shapely plants. Average height 1½ ft.

CLEOME PUNGENS.

Singular showy plants, attractive for a background to other flowers; growing 3 ft. high and usually called:

COBAEA. (Cobaee.) (Cathedral Bells.)
Scandens. A magnificent rapid-growing vine, with beautiful foliage, and large white or purple, bell-shaped flowers; seed should be planted edgewise, and eovered lightly; best sown indoors in March. 1/4 oz. 50c. Mareh.

Plants ready in May.

Cock's Comb. See Celosia.

COLEUS.

A great variety of brilliant colors can be had in plants grown from our seed. Extensively used for bedding, they making a fine show in any sunny spot. Best when sown indoors in March or April April.

Finest Mixed. A very choice mixture. Trade pkt. \$1.00.....

Plants ready in June.

Columbine. See Aquilegia. Convolvulus Major. See Morning Glory.

COREOPSIS. (Calliopsis.) (Gottesaugen.)

Showy and beautiful free-flowering plants of the easiest culture, doing well in any sunny position, blooming all summer and excellent for cutting and massing. It is best to sow them where they are to bloom, thinning out to stand 6 inches to 12 inches apart. By keeping the old flowers cut off the flowering season can be lengthened until late autumn

ened	until late autumn.

Plants ready end of April.

COSMOS.

Beautiful autumn-blooming plants. They produce thousands of beautiful flowers in pure white, pink and erimson shades, furnishing an abundance of cut flowers for autumn decorations when other flowers are searce. Should be sown in spring in the open ground, when danger of frost is past, or the seed may be started under cover aud afterwards transplanted. Plant not less than 18 inches apart in rows or in masses in beds. When the plants are about a foot high the tops should be pinched out to induce a bushy growth. They prefer a rather light, not too rich soil, but do well almost anywhere.

150	Early Flowering Mixed. Will bloom end	
	of July if started early indoors. 1/4 oz.

	the late sorts	.10

1/4 oz. 40c; ounce \$1.25. Plants ready in June.

(Erdscheibe, Alpenveilchen.) CYCLAMEN.

One of the most popular plants for winter and spring blooming. The foliage is beautifully marked, and the flowers are extremely handsome. Sow the seed in a compost of well-rotted manure, leaf-mold and coarse sand, thoroughly mixed, and they will make flowering bulbs in one year,

if well grown. They require gentle heat and even temperature. NO. 157 Extra Mixed Persicum. Prize stock; su perb strain of very large and rich-colored flowers Summer Cypress. See Koehia.

DAHLIA. (Dahlie.)

This favorite fall flower to sueeeed well should have a strong, deep and rieh soil. The roots should be stored during the winter in a dry, warm cellar, and eovered with sand. If the seed is started very early in a hotbed, and transplanted in May, the plants usually bloom the first year. Half-hardy perennials.

.10

(Stock-rose.) This is one of our handsome ornamental biennials, bearing spikes of flowers, about 5 ft. high, of almost every color. A clump in any garden gives an effect not obtainable with any other plant. Without an equal for planting among shrubbery or as a background. Seed sown in June or earlier will flower the following season. They require dry, deep soil, enriched with plenty of manure. of manure.

Best Double Varieties 239 Maroon 241 Rose-pink ... 243 Pure White.. Cherry-red .. .10 Flesh-pink .. .10 Sulphur-242

Plants early in May. Hyacinth Bean. See Dolichos.

ICE-PLANT. (Eispflanze.)
A pretty little trailing plant; the leaves and stalks being covered with small, watery globules, giving it the appearance of being covered with ice. A valuable plant for dry, sunny locations on banks, rockwork, borders and hanging-baskets. Annual

Ipomoea. See Morning Glory.

JAPANESE HOP VINE. (Humulus Japonicus.)
(Hopfen.)
A very rapid growing vine, with fine foliage, which is very dense and quite free from insect enemies, and which endures the heat remarkably Grows 25 ft. high and self sows if the ground is not disturbed. Annual.

Green Leaved. Large, dark foliage; 1/8 variegated. Like the preceding except with variegated foliage. Makes a handsome vine; ½ oz. 20c......

Joseph's Coat. See Amaranthus. Kenilworth Ivy. See Linaria.

KOCHIA. (Summer Cypress.) (Burning Busb.)
An annual ornamental plant that closely resembles a small cypress tree. It grows as much as 3 ft. high and in the fall changes from green to a flaming red. It makes an exceedingly attractive plant for a temporary hedge or a border for a bed of tall growing plants. The plant will bear

trimming like hedge plants and is easily grown from seed and readily transplanted.

NO. PKT. Trichophylla. True Summer Cypress; 3/8 oz. 15c...

KUDZU VINE. (Jack-and-the-Beanstalk.) A rapid growing vine of great merit. Leaves light green and heart-shaped. Attains a growth of 25 ft. the first season if started in a hothouse early. Perennial

Roots ready in April.

LARKSPUR. (Delphinium.) (Rittersporn.) Annual Sorts.

For perennial varieties, see Delphinium.

This is one of our best garden flowers. Seeds sown in the open ground before the close of April will produce flowering plants by the beginning of July, and give a continuous succession of flowers from then until frost. They make handsome beds and their free, graceful habit and bright colors are very effective when interspersed in the old-fashioned flower or shrubbery border. Good, rich soil dug deep and a sunny location suit them best.

Mirabilis. See Four O'Clocks. Momordica. See Balsam Pear. .15

MONARDA. (Bergamot.)

A perennial aromatic herb, growing two feet high and bearing tufted heads of red or deep rose colored flowers. An old-fashioned favorite.

293 Didyma. (Cambridge Scarlet.) Lustrous dark scarlet15 Monk's-hood. See Aconitum.

MORNING GLORY. (Trichterwinde.) (Convolvulus Ipomoea.)

MOON FLOWER.

At night and during dull days the plants are covered with an abundance of large, pure white, fragrant flowers, 5 to 6 in. in diameter. It grows very rapidly and will cover a large surface. The most rapid grower of any annual in a sunny location.

White. (Ipomaea Grandiflora.) ¼ oz.

Plants ready end of May.

Mourning Bride. See Scabiosa.

Musk Plant. See Mimulus.

Myosotis. See Forget-Me-Not.

NASTURTIUMS.

For picking for the house, few flowers can compare with these easily grown annuals. Time was when no garden was without a few, either tall or dwarf, but the appearance of black aphis makes it necessary to have a sprayer and some Nicotine handy. The soil seems to get "sick" when they are grown too often in the same spot

and the results are disappointing. The more nasturtiums are picked the more flowers will come, altho if a few seeds are wanted to pickle and allowed to ripen, no particular harm would be done. The tall kinds are suitable for training up on posts or fences, the dwarf for a border. NO.

298 Superb Hybrid Tell Mixed Advantage PKT.

NEMOPHILA. (Lovegrove.) (Triften oder Hainblume.)

OENOTHERA. (Evening Primrose.) (Nachtkerze.)
Beautiful, free-flowering plants, very useful for beds and borders, flowering in long spikes. Common garden loam. Biennial.
303 Biennis. Beautiful clear canary-yellow. ...10

PANSY

(Heartsease, Viola Tricolor.) (Stlefmuetterchen.)

We endeavor to get absolutely the best strains of Pansies grown in France, England and Germany. A perusal of the list will show the choicest varieties, regardless of cost and if proper care is exercised in sowing, the germination will be found to be high. Seed sown in hotbeds or cold frames in February or March will flower better during the fall and winter, while that sown in August or September and wintered over will give better results in spring and summer. On account of the delicate nature of the fancy varieties, extreme care should be used to start the seeds, light, rich soil, made fine with a rake or sieve being important and a covering of newspaper or cheese-cloth until the seeds, which should be only slightly covered with soil, are up, is absolutely necessary to insure a good stand.

If more plants come up than are needed, when they have their fourth or fifth leaf transplant them

If more plants come up than are needed, when they have their fourth or fifth leaf transplant them 3 in. apart each way, taking them as they come, rather than picking out the strongest, as the delicate plants are apt to produce the finest flowers. Protection from the midday sun is necessary to have large

A.C.KE

flowers, and keeping them picked will extend the flowering period. A mulching of Sheep Manure twice a month and a dusting of Tobacco Dust as often, will make them grow and keep the insects away.

	The Glant flowering only are listed.

DOUBLE PETUNIA.

It is, perhaps, not generally understood by the buying public that seed of the double sorts are only obtained by artificially fecundating single blooms with the pollen from the double. This makes the seed necessarily high priced. In spite of all possible care only a small percentage will produce double flowers, but the singles are of an unusually fine quality. The finest doubles are always grown from seed; when propagated from cuttings they degenerate.

The weaker seedlings should be carefully saved, as these invariably produce the finest double blooms. The same is true of the single sorts, the large strong seedlings usually being weedy, while the, at first, least promising ones produce the very finest flowers of the best colorings.

It is always best to sow Petunias indoors and transplant to the open in May.

335 **Double Mixed Fringed.** Extra fringed, blotched and striped, fecundated with double of the best strain. ½ pkt. 25c...

Plants ready in May.

PHLOX DRUMMONDH GRANDIFLORA.

PHLOX DRUMMONDH GRANDIFLORA.

(Flammenblume.).

The Phloxes are the showiest and most easily raised of all Annuals. We know of nothing which produces such a continuous supply of the most attractive flowers in a most wonderful range of colors. All the tints of the rainbow are represented with all possible variations of stripes, veins and eyes of contrasting shades. Seed should be sown in the ground as soon as danger of frost is over and in a few weeks the beds are a blaze of glory. May be grown in beds or borders, boxes or vases and make splendid cutting material as the blooms last long in water. 1 ft.

A very fine collection of choicest varieties of plants ready in April.

Platycodon. Sce Campanula. Polyanthus. See Primula.

Roots ready in April.

POPPY. (Papaver.) (Mohn.)
Annual Poppies should be sown as early in the spring as possible where they are to remain, as they do not stand transplanting. Sow very thinly, preferably in cloudy weather or after a shower, barely cover the seed, press down firmly, and they will come up in a few days. If they come up too thickly they must be thinned out to stand 3 or 4 in. or more apart if you wish best results. It is well to make several sowings at in-

Carnation Poppies

tervals to keep up a succession of bloom. If picked just before expanding the flowers will last several days. It is also advisable to pick the old flowers as soon as fallen, which will lengthen

the	blooming season quite a while.

	ers in endless profusion; most useful for	
	autting	10

ers in endless profusion; cutting Plants ready in May. California Poppy. See Eschscholtzia.

PORTULACA. (Portulak.) (Irish Moss.)

Too much cannot be said in praise of this popular and handsome annual which produces a perfect carpet in a remarkably short time. Succeeds best in an exposed, sunny location and flourishes in dry and very shallow soil. It is of a creeping nature with moss-like foliage, which from early summer until frost is hidden by the brilliant rose like flowers that open wide in the morning and close in the evening. Because of its foliage it is frequently known as Irish Moss or Moss Rose. It is well to mix the seed with three or four times its bulk of dry sand or soil which permits an even and easy distribution of the seed. It may safely be sown the latter part of April.

SUPERB MIXED. Our own mixture of the finest separate colors and unsurpassed for brilliancy and size. ½ oz. 20c, oz. \$1.00 .10 358 Coppery Rose 360 Bright Scarlet 362 Rose Striped. 359 Pot Marigold. See Calendula.

Potted Plants ready in May.

SAPONARIA. (Soapwort.) (Bouncing Bet.)

Vaccaria. A pretty annual with masses of satiny pink flowers. Must be sown three or four times if flowers are wanted throughout the season.....

SCABIOSA. (Mourning Bride.) (Scabiose.)

The erect 2½ ft. stems terminate in handsome flat, very double flowers with tubular petals from which yellow stamens protrude to resemble pins. The blooms are so abundant from July until frost and last so well when cut that this is one of the most popular garden flowers. Sow any time when danger of frost is over in good loam.

Annual Varieties.				
389	King of the Blacks. Fine deep purple	.10		
390	White10 391 Azure Fairy	.10

397	Peach Blossom. Giant flowering pink,			
	2 inches in diameter, on fine long stems.			
	⅓ oz. 75c	.15		
000	Perennial Variety.			

Caucasica. (Blue Bonnet.) Lilac-blue; good cut-flower; 3 ft..... 398 Plants ready in April.

SCHIZANTHUS. (Spaltblume.)
(Poor Mau's Orchid.)
This is one of the airiest and daintiest flowers imaginable, especially adapted to bordering beds of taller flowers and those of a heavier growth. The seeds germinate quickly and come into bloom in a few weeks from sowing. The florescence is such as to completely obscure the foliage, making the plants a veritable pyramid of the most delicate and charming bloom. The Schizanthus make admirable pot plants for the house in late winter and early spring. For this purpose sow in autumn. autumn.

Dr. Badger's Giant Hybrids. Tall growing type with very large flowers. All colors mixed

Sensitive Plant. See Mimosa.
Snapdragon. See Antirrhinum.
Snow-on-the-Mountain. See Euphorbia.
Spider Plant. See Cleome.

A perennial producing masses of small flowers that may be dried and used for winter boquets.

400 Sinuata Mixed. White, yellow, blue and many mixed together. 400 mauve mixed together.....

CLevkoyen.)

The charming colors, delightful fragrance, and free blooming character of the stocks have made them favorite plants for both summer and winter cultivation. They are very effective for beds and borders, and their handsome flower spikes are invaluable for bouquets and floral decorations. The large-flowering Ten-week section is the earliest to bloom. For succession sow the Cut-and-ComeAgain varieties, which bloom abundantly until frost. 1 ft.

SWEET PEAS

Sweet Peas

Price for all except those marked thus * are 10c per packet, 30c per ounce, $\frac{1}{4}$ lb. for \$1.00. Those marked thus * are 15c per packet, \$1.00 per ounce.

Giant Flowering Late Spencers. PKT. NO. 429 America. Red Flake, white ground. Asta Ohn. Pinkish lavender. 430 Blanche Ferry. Pink and white. 431 432 Campfire. Bright scarlet. Carmelita. Rose pink on white ground. 433 Crimson King. Rich deep crimson. 434 Constance Hinton. Giant pure white. 435 Daffodil. Deep crimson. 436 Defiance. Glowing orange-scarlet. 437 Del Monte. Salmon cerise pink. 438 439 Fiery Cross. Bright red orange-cerise. Fortune. Rich dark blue. 450 Hawlmark Lavender. Clear light lavender. 451 Hawlmark Scarlet.

Heavenly Blue. Delphinium blue. 453 454 Hebe. Large bright pink.

Illuminator. Salmon orange, overlaid cerise.

Ivory Picture. Ivory cream. 456

Modern culture of Sweet Peas has produced so many beautiful colors and such large flowers that they are almost indispensable. That these fine new varieties are harder to grow, goes without saying, for with many people success seems to be the exception the exception.

We made a canvass among our customers and have come to the conclusion that poor soil causes most of the failures and the unfavorable place they were sown and the wrong method of cultivation caused the rest.

Sweet Peas need rich soil—the richer the better—and it should be rich to a depth of at least one foot. Raw Bone Meal, a pound to three feet of row, is the best fertilizer, especially in heavy soil. Sheep manure comes next, and old cow manure and rotted horse manure follow, but fresh horse manure should never be used and in no case should any fertilizer come into direct contact with the seed, especially if the fertilizer is fresh.

In clay soil, three or four inches is a sufficient depth to sow the seed and in light soils six or eight inches will be better. Some people advise sowing the seed in a trench and filling in the soil as the plants grow, but this sometimes smothers the plants. Others advise covering the seeds to the proper depth at once and treading the soil down firmly. The latter method will take the seed longer to grow, so that early sowing is necessary if early flowers are wanted. By this method successive sowings may be made so that flowers may be had until frost.

Better results are obtained by having the vines away from walls and tight fences, as the plants seem to require air.

If the soil is frequently stirred and watered too often, rank vines are obtained, but at the expense of flowers. It is therefore better to only pull the weeds and stir the soil but little. If the vines are allowed to go to seed they soon cease blooming.

A mulch of lawn trimmings or similar material laid about the plants keeps the soil moist and cool and also checks the growth of weeds.

If the seed is treated with Sweet Pea Bacteria there will be an increase in size of flower and a more extended blooming season.

Our grower in California has recommended the following list as being the best of the 150 kinds he grows.

NO.

457 Mary Pickford. Dainty cream pink, suffused salmon.

Mermaid. Rich true lavender.

Miss California. Orange salmon, cream pink. 459

Powerscourt. Fine lavender. 460

461

Royal Purple. Rich purple. Royal Salute. Scarlet ccrise. 462

Snowball. Dazzling white. 463

Tangerine. Orange. 464

Warrior. Giant marcon. 465

466 What Joy. Cream.

467 Youth. Large white, pink picotee.

Superb Mixed Giant Flowering Spencers. To 468 the best mixture we are able to buy, we add some of each of the above list. Per pkt. 10c per ounce 25c, ½ lb. 75c, pound \$2.50.

DWARF SWEET PEAS.

Cupids Mixed. These grow six inches high and make compact bushes, suitable for a border. Pkt. 10c, oz. 15c, 1/4 lb. 40c.

Hardy Sweet Peas. Scc Lathyrus.

SWEET ROCKET. (Nachtviola.)

(Hesperis Matronalis.)
Showy hardy perennials growing two or more feet high and bearing spikes of fragrant flowers that will continue in bloom for several weeks if not permitted to go to seed.

SWEET SULTANS. (Centaurea Moschata.)
Undoubtedly the finest of all Centaureas for cut
flower purposes. The beautiful sweet-scented,
artistic-shaped flowers are borne on long, strong
stems, and when cut will stand for several days
in good condition. It is best, in this latitude, to
sow very early in the spring, so that they may
perfect their flowers before very hot weather

com	es.

SWEET WILLIAM. (Dianthus Barbatus.) (Bartnelke.)

Attractive, free-flowering hardy perennials usually classed as Dianthus with China Pinks, but are different from them in not blooming until the second year. In beds and borders they will produce a splendid effect in their rich, velvety flowers of many colors. They are of easy culture and profuse bloomers, appearing so early in the season that they fully repay for time and effort spent upon them. It is much better to raise new, vigorous young plants from seed every season

THUNBERGIA. (Thumbergie.)
(Black-eyed Susan.)
Beautiful, rapid-growing annual climbers, preferring a warm, sunny situation; used extensively in hanging-baskets and vases. Very pretty flowers in buff, white, orange, etc., with dark eyes; mixed colors; 4 ft.

Finest Mixed

TORENIA.

Beautiful, free-flowering plants; suitable for pot-culture in house or conservatory. They also succeed well in a moist, shady border, during the summer months, and, for baskets and vases, are unsurpassed. Light, rich loam. Tender perennial

Fournieri. Azure blue, with three dark blue spots and bright yellow throat....

VALERIANA. (Valerian.)
(Hardy Garden Heliotrope.)
Showy border plants with large heads of sweetly fragrant flowers of pinkish-white during June and July.
485 Officinalis. Strong heliotrope odor. 3

to 4 ft.....

VERBENA. (Eisenkraut.)

This well-known and popular annual of a low procumbent habit is very desirable for massing in beds, for borders, window boxes and hanging baskets. Large clusters of brilliant flowers are borne in profusion from the early summer until frost. The shades run from snow-white to deep purple, including eyed-sorts and striped varieties. They lend themselves readily for bouquets. Sown in the open in May, the seed will produce flowering plants by August, but the season may well be prolonged by starting indoors and transplanting after danger of frost is over. Soak the seed before planting. A light turfy loam is best. The mamnoth-flowering strain we offer has trusses and individual flowers of the largest size.

495 Pure White.. .10 496 Rose Pink10 497 Mixed Varieties. Four sorts. ½ oz. 35c .10

Bedding Plants ready in May.

VIOLET. (Viola Odorata.)

Well-known hardy plants with single deep blue flowers of delightful fragrance. Used extensively for winter in the greenhouse. Good also in the rock garden.

rock garden.
498 Odorata Perpetual. Sweet scented, deep

Violas. See under Pansies.

WALLFLOWER. (Cheirauthuscheiri.) (Gelbveil oder Goldlack.)

These fragrant flowers should be better known. Their adaptability for outdoor growth and for pot-culture should win favor here as in Europe, where they are very popular. The oriental coloring of the blooms in their rich reds and yellows is very effective. Succeed best in light, rich soil in a moist atmosphere. Sow the seed early in a hot-bed and transplant. On the approach of cold weather pot and grow in the house to flower all winter. Tender perennial. 2 ft.

XERANTHEMUM. (Everlasting.)

Handsome double everlasting flowers easily dried and used for winter bouquets. Annual.

ZINNIA

With seed supplies cut off from the usual sources during the late war, the world turned to California to fill the gap. The result brought us, among other things, the modern Zinnia. Not only have they been greatly increased in size of flower but also in color range until we now have more than a dozen. Not only that, but new forms have been developed so that the Zinnia now ranks as one of the two or three most popular and widely sown flowers grown. That all these improvements have been made without sacrificing vigor and sturdiness of the plants is gratifying because there is hardly another plant that will flower so well under adverse conditions. The separate colors enable our friends to work out almost any color scheme in the garden, an art in garden-making that adds greatly to the pleasure of the effort.

DAHLIAS

Chief among the newer of these is the Cactus type with long and twisted petals, which is a radical departure from the old-fashioned "Show" Dahlia with each petal set in its place. Then there are Decorative and Fancy Dahlias with reflex petals. Pompon Dahlias, which have small ball-shaped flowers, Single Dahlias in many beautiful colors and the tall-growing, loose-petaled type with its big fluffy blooms. We submit below a list of the very finest Dahlias that are now cultivated. These are so widely different from the common garden Dahlias of a few years ago that they will scarcely be recognized as belonging to the same group of flowers.

CACTUS DAHLIAS

Characterized by long, narrow, pointed, tubular and twisted petals. Each \$.60 .25 Cigarette. Giant flowers on strong stems; cream ground edge with pomegranite red.. .45 .20 Countess of Lonsdale. POMPON

We will have ten choice sorts of this type in all the colors, white, scarlet, pink, maroon, apricot, lemon, buff and bronze at a uniform price of 15c each. List of names furnished on request.

GLADIOLI

Gladioli should be planted at intervals of ten days from the time the ground can be worked (about April 15th) until July 15th. If this is done the gardener can be assured of a continuous mass of bloom from July until frost.

The following varieties were selected to give a wide range of the choicest coloring, form and size. Every sort listed here was chosen for its individuality.

	Each	Doz.	Per 100
Aflame (Prim). Rose shading to bright orange	\$.20	\$2.00	\$15.00

GLADIOLI-Continued

GERMAN IRIS

German Iris. They will grow almost anywhere, in the sun or shade, in sand or clay so long as the water does not stand on them at any time and they will survive our severest winters. They may be planted at any time between April and October but late plantings require protection from heaving late in the winter. The newer Irises rival the orchids in color range and descriptions are, at best, only meager. (S) means standard or upright petals, (F), falls or drooping petals.

Ambassadeur. Height 40 in. Giant flowers; S, smoky bronze; F, dark velvety maroon\$.25 .10 Iris King. S, clear lemon yellow; F, rich maroon bordered yellow..... Madame Chereau. S and F, white; edges frilled azure blue..... .10 Mrs. H. Darwin. S, pure white; F, white, slightly violet at base...... .10 Gold Imperial. 32 in. The best clear, all yellow yet produced...... .35 Lent A. Williamson. 42 in. S, campanula violet; F, velvety purple..... .15 Oriflamme. 24 in. Enormous flowers. S, blue lavender; F, blue purple..... .15 Pallida Dalmatica. True sort. S and F, soft lavender; branching...... .15 Parc de Neuilly. S and F, rich dark purple; late flowering; fragrant..... .10 Rhein Nixe. S, pure white; F, deep violet blue with white edge..... .10 Souv. de Mme. Gaudichau. 40 in. Giant flowers of richest deep purple...... .25 Monsignor. S, beautiful deep violet; F, darkly veined crimson purple..... .10

The above Iris are all extremely fine varieties and should not be confused with the older unnamed sorts.

JAPAN IRIS

Last of the wonderful Iris procession in time of flowering; but for size of plant and flowers, shapeliness, richness of coloring, beauty of pattern, and splendor of general effect it is unquestionably first.

it is unquestionably first.	Each	Doz.
1—Kumo-no obi. (Band of Gold.) Clear purple, with distinct rays and halo of white surrounding the golden throat, the pure white standards tipped		202.

center and white halo from which radiate many clear white lines. Standard		
white, tipped blue	.35	3.50
Superb Mixture of Japan Iris Roots, good assortment, un-named		2.00

WATER LILIES

Owing to the greatly increased use of the outdoor pool in gardening today, we are listing a few of the plants that are best suited for culture in this locality. A small pool to accommodate three or four lilies will more than repay for the little work involved.

The Tropical Lilies listed should be treated as annual plants and replaced each year. They are strong growing and will produce a hundred or more blooms in a season if given sufficient root space.

One cubic foot of soil is about the minimum in which a lily will do well. More space should be provided if possible. A good clay loam is the best soil and should be mixed about 2/3 soil with 1/3 well rotted cow manure or sheep manure.

The Tender Lilies listed below are started plants and cannot be set outside until late May or early June. The Hardy tubers may be planted as early as April with safety.

TROPICAL OR TENDER WATER LILIES—DAY BLOOMING	ì
General Pershing. Largest and best pink. Very free bloomer. August Koch. Purple lilac color. Strong grower. Flowers 7"-8". Panama Pacific. Opens to rich wine color changing to a Royal Purple. Very popular Pennsylvania (Blue Beauty). Deep blue. Yellow center. Flowers 8"-12". Mrs. Woodrow Wilson. Lavender blue. Very large flowers. Mrs. Geo. Pring. Pure white. Prolific bloomer. Flowers 8"-10". Mrs. C. W. Ward. Rich rose pink. Yellow center. Large flowers.	2.25 2.25 2.00 1.50 1.50
NIGHT BLOOMING TENDER LILIES	T2 1
Juno. Pure white. Saffron center, 8"-12" across Bissett. Rose pink. Cup shaped. 8"-10" across Omarana. Variegated pink. Very popular and large We are also able to supply a few packages of the tender lily seed. These may be started the winter in a small dish of soil covered with a few inches of water, and kept in a warm light These will bloom in about five months from seed.	1.50 1.50 during place.
Blue Zanzibar Water Lily Seed. Day Bloomer. 10 seeds. Package	.35 .25
HARDY WATER LILIES	
Strong dormant tubers which take the same general culture as the Tender Lilies. However the	y may
be left in the pool all winter if well covered with water.	Each
Alba Candidissima. Flowers large and pure white	\$1.00
Attraction. Rare variety, blooms 6 to 8 inches across; rich deep crimson, bright	
orange center	3.50
Comanche. Open to apricot, changing to copper bronze. Very popular	
Gladstoniana. Brilliant pure white; cup shaped bloom	1.50
Gloriosa. Red. Very large and fine. Fragrant	3.00 3.00
Laydekerie Lilacina. Lilac tinted; large flowers	2.50
Marliaca Chromotella. Bright canary yellow, 4 to 6 inches across	
Marliaca Rose. Blooms soft rose pink	2.50
Odorata Rose Arey. Deep cerise pink. Very large and fragrant	
Odorata W. B. Shaw. Flesh pink; large flowers	1.00
Paul Hariot. Orange changing to red through three days. Unique	2.50
Sunrise. Flowers clear yellow of the largest size	3.50
Nelumbium Speciosum. (Egyptian Lotus.) Flowers large; deep pink	
In addition to the lilies it is well to have a few edging plants to give variety and	
alness to the pool. Most of the plants are potted and can be lifted and kept indoors	in the
winter. Giant Arrowhead. Arrow shaped leaves, 1 to 3 ft. tall. Flowers spike-shaped and	
white. 3 for	\$1.00
Graceful Cat=Tail. Smaller tails than the common type and not so tall. Height about	42.00
4 ft. Excellent background plant. 2 for	.50
Imperial Taro. Similar to the Arrowheads with variegated leaves. Makes a good	
centerpiece for pools. Each	1.00
Papyrus. Triangular stalks 5 to 8 ft. tall. Good background for the larger pools.	
3 for	1.00
Parrot Feather. Long trailing feathery stems of bright green. Very effective for	F 0
corner planting or trailing over a fountain. 3 for	.50
Primrose Creeper. A rapid growing semi-aquatic vine, leaves waxy green; flowers bright yellow. 3 for	.50
Variegated Sweet Flag. Long variegated saber-like leaves, 1½ to 2 ft. tall. Hardy	
3 for	1.00
Herbralle Dalm Good healtground plant with fine stalks and leaves resembling the ribs	

All the above aquatic plants must be ordered in advance. They are very perishable and cannot be kept in stock for any length of time. However we can supply them on 2 or 3 days notice.

1.00 1.00

Umbrella Palm. Good background plant with fine stalks and leaves resembling the ribs

LILIES

Lilies thrive best in a rich, moist soil. Most varieties should be planted at least six inches deep and an inch or two deeper if of the Speciosum variety. When planted the bulbs should rest upon an inch of sand and about the same quantity should surround the bulbs on all sides. A light covering of leaves or litter should be spread when the ground freezes.

Auratum (Gold Banded). Undoubtedly one of the finest. Its large, graceful, fragrant flowers are composed of six petals of a delicate ivory-white color, thickly studded with chocolate-crimson spots, and striped through the center	Each	Doz.
a golden-yellow; 3 to 5 feet. July, September\$.40	\$4.00
Batemanni (Turks Cap). Color reddish orange	.50 .50	5.00 5.00
Regale (Myriophyllum). The large trumpet-shaped, delicately scented flowers, are ivory-white, shaded pink, tinged with canary-yellow at the base of the		
petals	.30	3.00
Speciosum Album. Pure white with a green band traversing the center of each petal	.40	4.00
white	.40	4.00
Superbum. A beautiful, native variety, bright, reddish-orange, spotted	.25	2.50
Tigrinum Splendens. Bright orange-red, spotted with black	.25	2.50
Tigrinum Flore Plena. Bright orange-scarlet, spotted black	.30	3.00
Umbellatum Grandiflorum. Coppery-orange, bell shaped flowers	.30	3.00

PAEONIES

The cultural requirements of the Paeony are few and simple: A sunny position; a deep, rich soil and a plentiful supply of water during the growing season.

We offer only whole roots as we do not handle "divisions" or "eyes". The planting of whole roots means the saving of two or three years in securing perfect blooms.

Varieties and prices on application.

TUBEROSES

The bulbs grow in any garden soil, but should be planted where the sun can reach them all day and with the tops out.

WEIGELA (Eva Rathke). Attractive flowers of deep carmine. 18/24 in	

HARDY ROSES

Roses should be planted in rich, well prepared soil, preferably clay loam, fertilized with well rotted manure or bone meal. They should be given thorough, but shallow cultivation. The best results can be obtained when planted in the open sunlight. All Roses are benefitted by winter protection, by banking about the plant with earth or covering with a light mulch of leaves or peat moss. Roses should be trimmed in the spring before growth starts, shaping the plant and removing all canes that have become weakened by blooming. The health and vigor of the plant can be improved by removing the dead flowers during the summer.

To counteract any damage to the leaves by worms use Arsenate of Lead; for aphis, thrip, or red spider, use Nicotine; and for fungus use Bordeaux Mixture or Sulphur.

HYBRID TEA ROSES (Everblooming or Monthly Roses)

Betty Uprichard. Blend of carmine, with coppery orange

C. K. Douglas. Scarlet flushed with velvety crimson

Dame Edith Helen. A magnificent fragrant, full bodied new rose of many substantial petals which curl back prettily, holding steadily to one vivid pink color.

Edel. Large bloom of purest white with ivory base.

Etoile De France. Garnet red cup, center of vivid cerise

Gruss An Teplitz. Color scarlet, shading to velvety crimson, very fragrant.

Lady Alice Stanley. Coral rose suffused pink

Los Angeles. Flame-pink toned with coral and shaded with gold at the base of the petals. The blossoms are very fragrant and of lasting color.

Mme. Edouard Herriot. A glorious commingling of terra cotta bronze, geranium red and dull copper; fine, long, pointed buds of coral red and yellow.

Mme. Butterfly. Charming bright pink, shaded apricot and gold.

Mrs. A. Ward. Deep orange yellow shading to cream

Mrs. Henry Bowles. Clear pink shading to salmon pink Mrs. W. C. Miller. Delicate pearl with salmon shading

Pink Pearl. Bright rose pink with salmon base, and red suffusion slightly accented at

Radiance. Rose with shades of opal and copper

Souv. De Claudus Pernet. Sunflower-yellow, very fine

William F. Dreer. Soft, silvery shell pink.

Any of above two-year field grown plants \$.50 each, set 12 for...... \$5.00

Etoile De Holland. Brilliant crimson red

Joanna Hill. Clear yellow with orange yellow heart

Mrs. Erk Penbroke Thom. Yellow center, clear lemon color

President Herbert Hoover. Cerise pink, flamed with yellow, orange and scarlet.

Rev. F. Page=Roberts. Golden yellow, stained outside with red.

Talisman. Gold, apricot, yellow, deep pink and old rose

Wilhelm Kordes. Exquisite golden yellow flushed with orange and copper red.

Any of above, 2 year field grown plants \$.65 each, set 12 for.....

Plums, all varieties, 5-7 ft. Each	.65
INSECTICIDES AND SPRAYING COMPOUNDS	
Most injurious Insects are roughly divided into two groups, those that chew or con-	sume
the foliage or flowers, which may be reached with stomach poisons and those that such	k the
plant juices which require a substance that kills by contact. Several of these may be bined for an all around spray on a small scale operation, but might be wasteful and	com-
pensive otherwise. Be sure to learn into which class the pest belongs that you wish to	
bat to avoid disappointment with your efforts.	
Lb. 4 lbs. 10 Arsenate of Lead. Powder. The best remedy against canker worm,	U IDS.
curculio and all leaf-eating insects on any plant, tree or shrub. A	
pure article that will not burn the foliage. Ours is the purest to be had. It sticks to the foliage. Use as directed on the package \$.30 \$1.00 \$	\$20.00
had. It sticks to the longs. Ose as directed on the package \$ 500 \$\psi \text{15.00}	P.20.00

43

Bordeaux Mixture. This is recommended for the control of fungus diseases or blight, rot, leaf curl or whatever name is used to designate the condition into which various plants and trees get when infested. Ours is powdered, one pound of which will make five gallons ready to apply. It is advantageous to add one quart of molasses or a pound of glucose to a barrel to make it stick better.....

INSECTICIDES AND SPRAYING COMPOUNDS

(Continued)

Cyanogas "A" Dust. For the control of Rodent and Insect Pests. Will destroy rats, mice, moles, ground hogs, garden ants, etc. Dust a small quantity in run or borrows; the gas released by exposure to the air will destroy the vermin. ½ lb. can 45c; 1 lb. can 75c; Combination of One Pound Can and Special Duster Gun........\$2.15

Fish Oil Soap. Prevents the ravages of mealy bug and various kinds of worms and insects that infest the bark of trees and shrubs. Per lb. 40c.

Flit. This insect exterminator will destroy Moths, Roaches, Fleas, Chicken Lice, Ants, Flies, etc. May be used in any ordinary hand sprayer. It has a pleasant, aromatic odor and may be sprayed directly upon furniture, clothing, draperies or wall-paper without danger of injury or staining. It is non-poisonous and should be used in every home as a vermin preventative. Pint 60c—Quart \$1.00—Special Outfit for Household use—1 Pint and Sprayer \$1.00.

Lime and Sulphur Wash is conceded to be the best remedy, all things considered, that there is against San Jose scale, Scurvy Bark Louse, Oyster Shell Scale, etc., while the lime has some value against some fungus diseases also.

For a winter spray use one gallon of Wash to eleven of water and in summer one to sixteen. Per quart 40c; gallon 85c; 5 gallons \$3.25; barrel of 45 to 50 gallons, 24c per gallon, f. o. b. Cleveland.

Nicotine. A liquid used for killing Aphis or Green Fly on roses, etc. May be sprayed or vaporized. 40 per cent strength, per lb. \$2.75; ½ lb. \$1.50; ¼ lb. 80c; small bottles 25c. Unmailable.

Nicotine=Pyrox. A combination of Bordeaux, Lead and Nicotine, forming a combination for protection against fungus, leaf-eating and sucking insects. 1 lb. 50c; 5 lbs. \$1.75

RED=SQUILL RAT POWDER. The government officials in the U. S. Agricultural Department are much concerned about the enormous annual loss caused by rats. A rat destroying agency that would be safe to use around the home and poultry yard and at the same time leave no annoying odors was long sought and finally found in this RAT POWDER. It is dusted on or mixed into any food the rats like and if there is enough to go around, it cleans them out. It is perfectly harmless to humans, house pets or even Baby Chicks. A package is enough for one pound of food. Price, 25c. Postage, 3c.

Hammond's Slug Shot. Recommended for most worms and caterpillars which infest cabbage plants, currants, gooseberries and the like. 1 lb. Sifter Carton, 25c; 5 lb. can \$1.00.

Scalecide. This is a miscible oil effective against scale on fruit and shade trees. It is used the same as the Lime and Sulphur Wash, opinions differing as to which is the best to use when considering the effects on the trees. Use 15 gallons of soft water to one of Scalecide. Price, Quart 75c; \$1.75 per gallon; 5 gallons for \$6.00; 10 gallons for \$10.00; 50 gallon barrel \$26.50.

Sulphur—Flowers of. Very finely pulverized for arresting mildew. Pkt. 1/2 lb. 15c; lb. 25c.

Tobacco Dust. Fertilizer and insecticide. An excellent fertilizer for lawns and gardens, and a good preventive against cut worms and leaf eating caterpillars. Dust onto the plants when they are wet, and for cut worms spread on the ground around the plants to be protected. If you have been troubled with wormy radishes or sickly lettuce, use a tablespoonful to the foot in the bottom of the furrow and sow the seeds right in the Tobacco Dust. It is a sure cure and will give you perfect radishes and lettuce. Per lb. 20c; 5 lbs. 90c; 10 lbs. \$1.75; 25 lbs. \$3.75.

Tree Tanglefoot. Similar to that used in making fly-paper. It is easily applied and is a most effective and economical protection for Fruit, Shade and Ornamental Trees against all crawling insects such as Canker Worms, Climbing Cut Worms, Ants; and the caterpillars of the Gypsy, Brown Tail and Tussock Moths. Prices, 1 lb. can 60c; 5-lb. can \$2.75; 10-lb. can \$5.25; 25 lb. pail \$11.00.

effective liquid for control of Aphis, Thrip, Scale, Rose Bugs and Mealy Bug. Price.....

SEMESAN

The modern Disinfectant for seeds, bulbs, corms, roots and tubers of vegetables and flowers. There are a number of plant diseases that become established in the soil and hinder or entirely destroy the plants they attack. These diseases go by various names and affect many kinds of plants but the treatment is the same for any, namely put a small amount of Semesan in the package of seed and shake thoroughly before planting or in the case of roots or bulbs dust on or soak in a solution as directed. 2 ounce tin 50c.

BEGINNER'S READY-TO-USE OUTFIT

With Bees and Queen, All Ready to Go to Work

This outfit comes nailed and painted ready for use, with a 2-pound package of Italian bees and queen. It includes one-story 10-frame hive with full sheets of foundation, Standard smoker, Boardman feeder, bee-veil, hive-tool, "Starting Right with Bees," and explicit printed directions for handling outfit. It affords an easy and sure way to begin beekeeping.

Write us for the A. I. Root Co.'s complete 48 page free catalogue.

FERTILIZERS

The need for different formulas of Fertilizers is based on the needs of the plants. Nitrogen, sometimes called Ammonia, produces the leaves, Phosphoric Acid, enlarges the flowers and fills out the seeds and Potash makes the roots and stiffens the plant stem. Which fertilizer to use should be governed by the results sought, most plants requiring some of each of the above elements but varying in the percentage. We handle the following list and make the analyses speak for each formula but should add by way of caution that the higher the analysis the stronger the product and the more care should be used to follow directions in order to avoid burning. The figures given represent the percentage of Nitrogen, Phosphoric Acid and Potash respectively and always in the same order.

Triple XXX Soil-Bil-Der. 10-6-4. 5 lbs. 60c; 25 lbs. \$1.75; 50 lbs. \$3.00; 100 lbs. \$5.00; ton \$96.00.

Lawn-Garden Pure Bone Fertilizer. 1.65=27=0. 5 lbs. 40c; 25 lbs. \$1.25; 50 lbs. \$2.00; 100 lbs. \$3.50; ton \$60.00.

Pulverized Sheep Manure. 2=1=2: 25 lbs. \$1.00; 50 lbs. \$1.75; 100 lbs. \$3.00; ton \$48.00.

Pure Raw Bone Meal Fertilizer. 3.70-20-0. 100 lbs. \$4.50; ton \$72.00.

Soil-Bil-Der. 4-12-1. This is Sheep Manure with chemicals added to comply with the new State Fertilizer Law. 25 lbs. \$1.25; 100 lbs. \$3.50; ton \$60.00.

Nitrate of Soda. 16% Nitrogen. Dissolve one teaspoonful in a gallon of water and sprinkle on the ground around the plants. 1 lb. 20c; 5 lbs. 60c; 25 lbs. \$2.25; 100 lbs. \$5.00.

Nitrate of Potash. 14=0-44. Highly concentrated. Use one teaspoonful to one gallon of water on the ground around the plants. 1 lb. 25c; 5 lbs. \$1.00; 25 lbs. \$4.00.

Sulphate of Ammonia. 25½% Ammonia. Highly efficient to destroy weeds, such as Dandelions, Chickweed, etc., in the lawn and to use as a fertilizer. 1 lb. 15c; 5 lbs. 50c; 25 lbs. \$1.25; 100 lbs. \$4.00.

Agricultural Lime. Use 1 lb. to 5x10 feet on acid soil once in five years and if very acid use not over twice as much. 50 lbs. \$1.00.

PLANTABBS ODORLESS PLANT FOOD TABLETS

11-15-20. Highly concentrated and pressed into small tablets to put, one in a five-inch pot once a month. Box of 30, 25c; by mail, 28c; 75 for 50c; by mail 56c; 150 for \$1.00; by mail \$1.07.

Superior Plant Food. 11½=6=8. High grade article intended for potted plants. 7 oz. tin, 50c; by mail 56c; 16 oz. tin \$1.00; by mail \$1.08.

Muriate of Potash. 48% Potash. For tubers and root crops and to make plants sturdy. 1 lb. 20c, 5 lbs. 60c, 25 lbs. \$2.00.

Sulphate of Aluminum. Used around Rhodendrons and Azaleas to keep the soil acid. 1 lb. 25c, 5 lbs. \$1.00.

Manure! More Manure!

You must have manure, and thanks to ADCO you can have quantities of it. You can turn every bit of vegetable refuse—cuttings, weeds, leaves, etc., from the garden, straw and cornstalks from the farm, into rich manure by the simple ADCO Process. Information free.

ADCO is a chemical preparation much like lime that is successfully used to reduce waste vegetable matter to usable compost in one season. A pit or a large enough box is gradually filled with refuse and sprinkled periodically, layer by layer with ADCO and kept moist. 25 lbs. \$2.25, 150 lb. sack \$11.50. Delivery extra.

GRANULATED PEAT MOSS

The more we observe and use this recent addition to aids in successful gardening the more enthusiastic we become. It has innumerable uses, such as lightening heavy soil, covering small seeds, mulching plants and shrubs during the summer to retain moisture, and in winter to prevent heaving, spreading on the lawn after seeding and fertilizing to protect the seed until it sprouts, mixing with soil for potting, rooting cuttings, growing bulbs in the house in water and a bowl, in the chicken coop to conserve the droppings, in short it is almost as useful as the soil itself and practically assures success wherever and whenever it is used. Used with discretion a bale will last two or three years in the ordinary home garden, as it contains about 18 bushels when ready to use. A bale is 2x2x3 feet. Price, 1 bale \$4.25, 5 bales at \$4.00, 10 bales at \$3.75 each. If taken, 50c per bale reduction will be allowed.

Pets and Supplies

OUR BIRDS

Our birds are all imported from the best bird-breeding countries of the old world; and are tested for song before leaving the homes of their breeders; the next test is made immediately upon their arrival in this country. When they arrive at our store they are again tested and classified according to the purity of their note-tones and the quality and length of their songs. At this final testing the price of each individual bird is decided upon. This price is governed by the bird's qualifications as a singer

It is because of these several tests that we have gained the reputation for having the choicest birds. As we value this reputation, we have fitted out a separate room where customers may choose any bird they prefer, taking as much time as they desire. Most of the best canaries reaching this country are the St. Andreasburg Rollers, the louder Hartz Mountain Warblers, the Blue Ribbon Choppers and the large English or Norwich singers. We also sell Australian Shell Parokeets or Love Birds and in season, female canaries for breeding.

The prices of the birds vary from season to season; but tested singers having the best physical traits are usually priced at from \$8.00 to \$12.00, while some having songs of unusual quality will be priced higher; others, whose songs have not fully developed, and yet may eventually prove to be splendid singers are priced below the minimum quoted above.

BIRD SUPPLIES

The Bird Foods and Remedies offered in the following pages have been made and sold by this company for over fifty years. Competing preparations by the dozens have come and gone during this time, while the sale of our preparations increases each year. Our foods and remedies could not have survived this competition unless they possessed the unusual merit that we claim for them.

Our large stocks of valuable birds are nourished and conditioned with exactly the same preparations that we offer for sale.

WILSON'S MIXTURE OF CANARY AND RAPE SEED

is now, as it has been for over fifty years, a blend of the finest and cleanest Canary and Rape Seed that it is possible to purchase. Food for human epicures is not selected with more care than we give to the selection and mixing of these seeds; and it is a peculiar fact that more than a quarter of a century before an enterprising baking company began to pack food for human consumption in sealed packages, this company was sealing bird-seed in cardboard containers so it would reach the customer as fresh and clean as when mixed.

If your bird refuses the seed you now get for him or if it fails to nourish him sufficiently try this mixture of ours. Put up in pound cartons and priced at 20c. By mail, postpaid, 27c.

WILSON'S SONG RESTORER AND CANARY BIRD FOOD

When birds are sick or out of song this will restore both health and melody. Birds in perfect health may have their song improved by regular feedings of this, as directed on the container. Price 20c. By mail, postpaid, 25c.

WILSON'S MOCKING BIRD FOOD

The ingredients of this food are selected and mixed, with the object of duplicating as nearly as possible the diet of the birds living in their natural state. It contains vegetable, animal and insect components; and its use will keep the birds in the best of physical condition and consequently in good song.

This food will be relished by Mocking Birds, Thrushes, Troopials, and all soft-billed birds. The price is 50c per can. By mail, 60c.

WILSON'S PARROT SEED

contains a mixture of the seeds best suited to the nourishment and sustenance of the parrot. This mixture contains many food elements not supplied by the sunflower seed alone. It is thoroughly recleaned, well cured and packed in sealed cartons so it reaches the customer fresh and clean. Carton containing 1½ lbs., 30c. By mail, 38c.

WILSON'S CHOICE SUNFLOWER SEED

This seed is selected expressly for Parrot Food and consists entirely of clean, plump, meaty kernels; it makes a nourishing ration for the birds; and next to Wilson's MIXED Parrot Seed is the best seed to feed him. Per lb., 20c. By mail, 27c. Write for special prices in bulk.

WILSON'S BIRD TONIC

A certain cure for loss of song, weakness when moulting, colds, asthma or hard breathing, shedding feathers out of season and other diseases of cage birds. Price 25c. By mail, postpaid, 33c.

WILSON'S PARROT TONIC

A cure for colds, lack of condition, over-feeding, plucking feathers, etc. Price, 40c. By mail, postpaid, 45c.

WILSON'S PURE INSECT POWDER

For Use on Birds

Made from fully developed Pyrethrum flowers; bolted to extreme fineness to insure penetration to the roots of the feathers. Non-poisonous to Birds or Animals but sure death to insects. In 1 oz. bottles, 20c. In Blow Guns, 30c. Either by mail, 5c extra.

SILVER LAKE SAND

is necessary to the welfare of the cage-bird, which having no teeth for chewing its food must depend upon grit taken into the crop to masticate and prepare the food for the digestive processes. The sand is priced at 10c per box of 2 lbs. By mail, postpaid, 18c.

SAND PAPER FOR BIRD CAGES

We prepare this paper ourselves using the best materials to safeguard the health of the bird. A great convenience in the home. Comes twelve sheets in a package in the following sizes: No. 1, 8½x8½ in. No. 2, 8¾x6¾ in. No. 3, 9¼x7¾. No. 4, 10¾x7¾ in. No. 5, 11½x8½ in. No. 6, Round, 9 in. in Dia. No. 7, Round, 11 in. in Dia. Price, No. 1, 2, 3, or 4, 20c per doz. Nos. 5 or 6, 25c; No. 7, 30c.

Outside Bird Bath. Celluloid and Colored Enamel; attaches to outside of cage at the door. Does away with all spattering of cage and surroundings. Size 4x4½ inches. Price \$1.00.

Bird Cups. Various styles, flint glass or porcelain, to fit cages of different makes. Each 20c and up.

Bird Cages. Various sizes, different makes, brass and Duco, in different colors, and stands to match.

Parts for Bird Cages. Perches, Springs, Pans, etc.

Breeding Cages and Supplies. Nests, Hair, etc.

Cuttle Bone. Plain, per pound, \$1.00; dressed, \$2.00. Each, 5c; with wooden holder, each, 10c.

Food Cups. For feeding Song Food and Dainties, each, 10c.
